It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.

--- SUBDUTI: Monomer (By similarity).

--- SUBCELUULAR LOCATION: Secreted protein.

--- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.

--- MISCELLANEOUS: The peptidase $60 domains do not have protease function as the catalytic residues are missing.

--- SIMILARITY: Belongs to the transferrin family.

--- SIMILARITY: Contains 2 peptidase $60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q29443;

Human CDT peptide fragment #2. 25-MAR-2004 05-JUL-2002; 2002DE-01030550. 07-JAN-2004. Homo sapiens (DADE-) DADE BEHRING MARBURG GMBH. (first entry)

Claim 4; SEQ ID NO 2; 21pp; German.

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

WPI; 2004-073743/08.

Althaus H;

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMGGKEDLIWELL, TTEDSIAKIMNGSADAMSLDGGF, SKLSMGSGLNLSERN and YEKYLGEEYVKAV (ADD46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

The invention relates to identifying glycopolypeptides in a serum or CC plasma sample comprising immobilizing derivatized sample glycopeptides to a solid support, releasing the sample glycopeptide CC glycopolypeptides to a solid support, adding to the released sample CC glycopeptide fragments standard peptides, and identifying released sample CC glycopeptide fragments that correspond to standard peptides added by mass gentroscopy. Also included are a method for identifying one or more CC diagnostic markers for a disease, a composition comprising peptides are containing the glycopylation sites (AEE35897-AEE339378, where the peptides CC each correspond to peptide fragments derived by cleavage of polypeptides cusing the same cleavage reagent) and a kit comprising peptides containing the glycopylation sites (AEE35897-AEE39378). The methods are useful for clidentifying glycopolypeptides in a serum or plasma sample. The methods can be used for blood serum profiling for the detection of prognostic and CC diagnostic protein markers. It can also be used to identify and/or validate drug targets and to evaluate drug efficacy, drug dosing, and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The antibodies are useful for diagnosis of alcoholism, CDT, which lacks glycosylation at Asn413 alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;

                                             The invention relates to a novel method for the quantitative analysis of a protein. The method involves hydrolyzing a first test sample in water containing 90% or more of 18-0 (an isotopic labeling element), hydrolyzing a second sample in water containing 90% or more of 16-0, mixing the hydrolyzed substance of the first and second samples, and carrying out quantitative analysis of the liquid mixture by liquid chromatography/electrospray ionization-mass spectrometry (LC/ESI-MS). The method enables the quantification of proteins in large-scale proteomics, and trace amount of proteins present in an organism can be quantified accurately and efficiently. This sequence represents a peptide fragment used in the protein quantitative analysis method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    drug toxicity. The methods can also be used for the detection of changes in the state of glycosylation of proteins based on the concurrent application of protein abundance measurement of protein glycosylation on the same sample. The method allows fast throughput and simplicity. It can be readily adapted for high throughput analysis of samples, which can be particularly advantageous for the analysis of clinical specimens. The method can also be automated to facilitate the processing of multiple samples. The present sequence is a human glycopeptide that does not contain an N-linked glycosylation site, suitable for use as a reference peptide in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Quantitative analysis of protein, by hydrolyzing test sample and control in water containing labeled oxygen, mixing hydrolyzed substance and subjecting liquid mixture to liquid chromatography/electrospray

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                              The invention relates to a method of identifying a protein comprising receiving mass spectrometry data that includes putative proteins, peptides and peptide confidence value, identifying and grouping proteins that share peptide information and determining for each group if it is likely that only one protein is present or if peptide evidence exists to support that other proteins in the group are present. The invention is used for identifying proteins in the field of drug discovery, in protein and gene expression analysis, as biomarkers and in other areas of systems biology. This sequence represents a peptide used in the scope of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identification of protein for e.g. drug discovery involves grouping proteins based on mass spectrometry data and determining whether only one form of protein is present or there is evidence to support the presence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-DEC-2003; 2003US-0531405P.

                                                                                                                                                                                                                                                                                          flagellar energy carrier protein expression, function, or levels in a subject. The sperm flagellar energy carrier protein is useful for treating sperm flagellar energy carrier protein-associated disease or disorder, e.g. infertility. The protein is also useful as contraceptive agent. The present sequence is a peptide derived from human Aldolase A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The new invention relates to a new mammalian sperm specific fibrous sheath protein, that is believed to function as an adenine nucleotide translocase, and has been designated sperm flagellar energy carrier (SPEC) protein comprising SEQ ID NO: 2 or 4. The protein is located in the principle piece of the sperm tail, but not in the midpiece. SFEC is believed to be essential for sperm motility, and thus antagonists of SFEC may have use as contraceptive agents. Also claimed are a pharmaceutical
                                                                                                                                                    Sequence 23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-MAR-2004; 2004US-0554085P.

                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel isolated polypeptide comprising or consisting of two or more C35 peptide epicopes. The polypeptide of the invention demonstrates cytostatic activity and may be useful for the formulation of an immunogenic composition, such as a vaccine, to induce antibodies and cell-mediated immunity against target cells such as tumour cells. Furthermore, the polypeptide and its analogues may be useful as prognostic markers for carcinoma, such as human breast or bladder carcinoma. The current sequence is that of human breast/bladder carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  გ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a compound that can bind to the heptad repeat sequences HR1 and/or HR2 of the NadA and Hada adhesin on the surface of a meningococcus and haemophilus, respectively, thus inhibiting the ability of the meningococcus and haemophilus either to infect a host organism or to spread an existing infection. The compound is an oligopeptide or polypeptide, or a peptidomimentic compound of the oligopeptide, with anticulated and or anti-haemophilus activity. The invention also includes a pharmaceutical composition comprising the compound and a carrier; a method for treating a patient suffering from a meningococcal or haemophilus infection by administering to the patient the pharmaceutical composition; mutant NadA and HadA proteins, where the mutant protein lacks one or more of the HR1, HR2, or fusion sequences; a nucleic acid encoding the mutant protein; and a bacterium, which expresses the nucleic acid. The compound is useful as a medicament, for the manufacture of a medicament, and for treating a patient for meningococcal or haemophilus infection. This sequence is an extended Neisseria meningitidis 2996 adhesin NadA heptad repeat sequence HR2a.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

They are also used for treatment of essential thrombocytemia, Vasquez polyglobulia, myelofibrosis and chronic leukocytic leukemia. The peptides also show some and inhibiting pathological and chronic leukocytic leukemia. The peptides also show some and inhibiting pathological activity, and are antagonists of chemokines of the CXC type and inhibiting pathological activity.
                                                                                                                                                                                                                                              Haematopoiesis; haematopoietic stem cell; cell differentiation; haematopoiesis proliferation; myoproliferative syndrome; cytoprotection; apoptosis; medullar expansion; inflammation; angiogenesis; myelofibrosis; thrombocytemia; Vasquez polyglobulia; chronic leukocytic leukemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAG63418-AAG63511 represent peptides which are used in therapy. The peptides are haematopoiesis inhibitors, haematopoietic stem cell proliferation stimulants, cell differentiation inducers, and chemokine antagonists. The peptides are used as a medicament for treating the harmful effects of chemotherapy on haematopoietic stem cells; inhibitin haematopoietic proliferation, in the treatment of myoproliferative
                                                                                                                                                                                                                                                                                                                                                                     15-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New eicosa-, tricosa- or pentacosa- to heptacosa-peptides, useful e.g. for stimulating hematopoietic stem cell proliferation after chemotherapy or radiotherapy or as antiinflammatory agents.

The peptides are used as a medicament for treating the harmatopoietic stem cells; inhibiting charmatopoietic proliferation, in the treatment of myoproliferative catagonists cytoprotection against cytoprotect of sepecially in confection of haematopoietic cells against apoptosis; medullar expansion computing in the treatment of medullar insufficiency or medullar grafts; treating inflammation; inhibiting pathological angiogenesis; or conferentiating abnormal cells into healthy cells. They are also used for treatment of essential thrombocytemia, Vasquez polyglobulia, compelofibrosis and chronic leukocytic leukemia. The peptides also show some antiviral activity, and are antagonists of chemokines of the CXC type and subfamily ELR, especially IL-8, NAP2, groalpha, grobeta and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

AAG63418-AAG63511 represent peptides which are used in therapy. The peptides are haematopoiesis inhibitors, haematopoietic stem cell proliferation stimulants, cell differentiation inducers, and chemokine antagonists. The peptides are used as a medicament for treating the harmful effects of chemotherapy on haematopoietic stem cells; inhibiting the contractions of the contraction of the contr
                                                                                                                                                                                                                                                                                                       New eicosa-, tricosa- or pentacosa- to heptacosa-peptides, useful for stimulating hematopoietic stem cell proliferation after chemos or radiotherapy or as antiinflammatory agents.
                                                                                                                                                                                                                                          Example;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-DEC-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-DEC-2000; 2000WO-FR003532.

                                 AAG63418-AAG63511 represent peptides which are used in therapy. The peptides are haematopoiesis inhibitors, haematopoietic stem cell proliferation stimulants, cell differentiation inducers, and chemokine antagonists. The peptides are used as a medicament for treating the harmful effects of chemotherapy on haematopoietic stem cells, inhibiting haematopoietic proliferation, in the treatment of myoproliferative syndromes; cytoprotection against cytotoxic effects, especially in protection of haematopoietic cells against apoptosis; medullar expansion or purging, in the treatment of medullar insufficiency or medullar grafts; treating inflammation; inhibiting pathological angiogenesis; or differentiating abnormal cells into healthy cells. They are also used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  syndromes; cytoprotection against cytotoxic effects, especially in protection of haematopoletic cells against apoptosis; medullar expansion or purging, in the treatment of medullar insufficiency or medullar grafts; treating inflammation; inhibiting pathological angiogenesis; or differentiating abnormal cells into healthy cells. They are also used for treatment of essential thrombocytemia, Vasquez polyglobulia, myelofibrosis and chronic leukocytic leukemia. The peptides also show some antiviral activity, and are antagonists of chemokines of the CXC tree and inflamily. The periods are contained to the contained to the care and the care an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New eicosa-, tricosa- or pentacosa- to heptacosa-peptides, useful e.g. for stimulating hematopoietic stem cell proliferation after chemotherapy or radiotherapy or as antiinflammatory agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Haematopoiesis; haematopoietic stem cell; cell differentiation; haematopoiesis proliferation; myoproliferative syndrome; cytoprotection; apoptosis; medullar expansion; inflammation; angiogenesis; myelofibrosis; thrombocytemia; Vasquez polyglobulia; chronic leukocytic leukemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                នន្តន្តន្តន
                                                                                   CC AAG63418-AAG63511 represent peptides which are used in therapy. The CC peptides are haematopoiesis inhibitors, haematopoietic stem cell coroliferation stimulants, cell differentiation inducers, and chemokine CC proliferation stimulants, cell differentiation inducers, and chemokine CC antagonists. The peptides are used as a medicament for treating the CC harmful effects of chemotherapy on haematopoietic stem cells; inhibiting CC haematopoietic proliferation, in the treatment of myoproliferative Syndromes; cytoprotection against cytotoxic effects, especially in CC protection of haematopoietic cells against apoptosis; medullar expansion CC protection of haematopoietic cells against apoptosis; or medullar expansion or purging, in the treatment of medullar insufficiency or medullar grafts (treating inflammation; inhibiting pathological angiogenesis; or CC differentiating abnormal cells into healthy cells. They are also used for CC treatment of essential thrombocytemia, Vasquez polyglobulia, CC myelofibrosis and chronic leukocytic leukemia. The peptides also show some antiviral activity, and are antagonists of chemokines of the CXC type and subfamily ELR, especially IL-8, NAP2, groalpha, grobeta and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                              CC AAG63418-AAG63511 represent peptides which are used in therapy. The CC peptides are haematopolesis inhibitors, haematopoletic stem cell continuous provides are haematopolesis inhibitors, haematopoletic stem cell contagonists. The peptides are used as a medicament for treating the CC antagonists. The peptides are used as a medicament for treating the CC harmful effects of chemotherapy on haematopoletic stem cells; inhibiting CC haematopoletic proliferation, in the treatment of myoproliferative CC syndromes; cytoprotection against cytotoxic effects, especially in CC protection of haematopoletic cells against apoptosis; medullar expansion CC programs, in the treatment of medullar insufficiency or medullar grafts; treating inflammation; inhibiting pathological angiogenesis; or CC differentiating abnormal cells into healthy cells. They are also used for CC treatment of essential thrombocytemia, Vasquez polyglobulia, CC myelofibrosis and chronic leukocytic leukemia. The peptides also show come antiviral activity, and are antagonists of chemokines of the CXC Cype and subfamily ELR, especially IL-8, NAP2, groalpha, grobeta and
